DETAILED ACTION

Allowable Subject Matter

1. Claims 1-14 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, US Patent 5,987,328, discloses a method and apparatus for optimizing a wireless network comprising a plurality of base station using a cost function (fig. 1). However, the prior art fails to teach or make obvious for the steps of or means **“repeating the steps of reassigning and modifying such that a sum of distances between the plurality of intermediate transport nodes and the respective switching nodes to which each of the intermediate transport nodes are assigned is minimized and no further reassignments of the plurality of intermediate transport nodes take place”**, when the repeating is considered within the specific step of the method recited in claim 1. The prior art fails to teach or make obvious for the steps of or means **“centering each of the m moveable switching nodes among the base stations assigned to the respective switching node”**, when the centering is considered within the specific step of the method recited in claim 3 or the device recited in claim 7. The prior art fails to teach or make obvious for the steps of or means **“the network is optimized by iteratively recoupling and reassigning each of the plurality of intermediate transport nodes to a nearest central node and relocating the movable central nodes to a central location among respectively assigned intermediate transport nodes”**, when such network is considered within the specific structure of the device recited in claim 10. The prior art fails to teach or make

obvious for the steps of or means **“repeating the steps of reassigning and modifying such that the cost factor for communications between the plurality of base stations and the respective switching nodes to which each of the base stations are assigned is minimized and no further reassignments of the plurality of base stations take place”**, when such network is considered within the specific structure of the device recited in claim 13.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc T. Duong whose telephone number is 571-272-3122. The examiner can normally be reached on M-F (9:00 AM-6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D. Vu can be reached on 571-272-3155. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
